re-engineered (verb):

Pronunciation: /ˌriː ˈen.dʒɪˈnɪəd/ (UK), /ˌriː ˈen.dʒəˈnɪrd/ (US)

Definition:

1. The process of fundamentally rethinking and redesigning an existing system, process, product, or piece of equipment to operate more effectively, intelligently, efficiently, or reliably than its original design.
2. The comprehensive overhaul, reconstruction, or modernization of a mechanical component or piece of equipment, restoring it to full operational capability, to provide it a second life, often with improvements.
